---	---	-------------------	---------------------------------	---

What Causes A Surge?

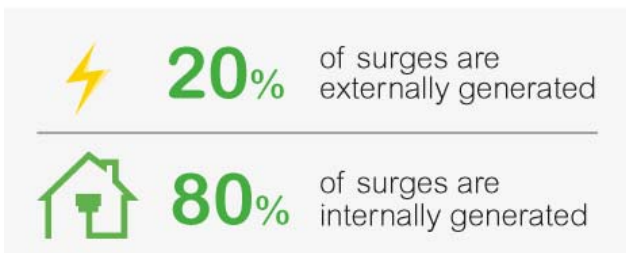

- Appliances cycling on and off throughout the day, major appliances account for 60-80% of surges within the home.
- Faulty wiring inside your home.
- Downed and damaged electrical lines caused from high winds, tree branches, animals and more.
- Random surges in the utility line, which can be caused from a damaged transformer or power outage.
- High Electricity Demand.
- Lighting which can cause extreme damage in an instant.

Top Reasons for Investing in A Whole Home Surge Protector:

- Save thousands over your initial investment cost.
- Potentially earn discounts from your insurance company.
- Protect sensitive & expensive electrical devices such as kitchen appliances, home office equipment, mobile technology, and more.

How Common Are Electrical Surges?

- The average home across the United States will experience on average 20 surges per day, 50% of those are internal.
- Over 20 million lightning strikes occur nationwide annually and cause severe damages to homes and businesses each year.
